---

## SUMMARY

Highly motivated, versatile, and committed software engineer with significant experience in developing robust code for high-volume businesses. Proficient in crafting dynamic and responsive applications using modern technologies and frameworks. Responsible, detail-oriented, and skilled in solving creative problems.

---

## EXPERIENCE

**ReliSource | Software Engineer | Feb 2022 - Present**

- Creating and managing REST APIs that handle 107000+ requests every 24 hours.
- Restructured organization email sending feature which is used to send 2000+ emails on average per day.
- Redesigned document generation process that generates over 600 documents daily.
- Implemented document e-signature feature that uses DocuSign API and is sent via email.
- Created cronjobs to monitor application state and send notifications.
- Designed and implemented system architecture using modern frameworks.
- Ensured pixel-perfect UI for a wide range of devices and support for multiple browsers.
- Developed and engineered an admin portal that is used by internal teams for managing the entirety of the business.
- Worked with Azure File Store and AWS S3 for storing documents on the cloud.
- Added Auth0 authentication system for public applications and LDAP authentication system for internal tools used within the organization.
- Worked with AWS EC2 to deploy and manage application servers.
- Configured and patched Datadog and Rollbar with applications for monitoring logs.
- Handle environment setup and deployment to production.
- Utilized: Ruby on Rails, React, Apex(Salesforce), AngularJS, AWS (EC2, Lambda, Cloudwatch, OpenSearch, S3), Postgres
